Category	Score (X / 5)	Notes & Commentary from Officials
Site assessment and creation of plan	3.0	Hard to hear the ems call and their plan Good call to 911 Cursory tree assessment. Friction saver not mentioned. Did not hear plan communicated. Couldn't hear all of 911 call, but sounded thorough. Audio made it hard to get detail, but it didn't seem like there was much communicated. good assessment of the scene and tree and from what i can hear the call to 911 was good but it was hard to hear
Contacted emergency services; quality of explanation and info provided	3.6	
Efficiency, speed, and safety	3.4	Ascending was slow and seemed to tire out the rescuers Good team work installing lines Moving rope ascent, but efficient with quick throwline installs. Team comms. Cursory casualty comms. Chainsaw mentioned, lowered to ground. Good communication with team and injured. good ascent but the climbers didn't assess the situation while ascending at all
Continued inspection and assessment	2.6	
Identification of hazards	2.6	Didn't really communicate hazards Only electrical hazards were assessed. Did not see if friction saver was secured. Secured and lowered chainsaw. Lowering the chain saw wasted time, it should have been dropped. good job removing the chainsaw but second climber isnt using eye protection and has his lanyard on the upper D rings but the lanyard is above his shoulders.
Method and execution of mitigation	2.4	
Assessment of casualty situation	2.2	They just yanked her ankle out of the union! No attention or effort made to help make that transition better for the patient Good job getting rid of the chainsaw. Good control of the injured leg but little else is said about the victims other injuries or condition Jostling casualty. Cursory assessment, no comms to ground regarding casualty. Two climbers supporting casualty. Supporting ankle. Lanyard around neck. No real assessment of the injured. no assessment prior to moving patient, no securing of patient while moving them.
Administration of first aid & assessing of urgency	2.4	
Adequate and appropriate stabilization of casualty for transport	2.6	
Choice of system and technical execution of casualty support/tie in	3.4	Not much thought out into patient comfort. And it was slow A lot was put into victim care during descent. Good teamwork between climbers. Green climber's lanyard around casualty's neck. Mostly smooth descent Mostly focused on speed. Loved the two climber descent, very smooth and good control of the injury, however I dont see the need to bring this climber down prior to EMS arrival, why not wait in the tree with the victim until they arrive and can provide assistance.
Quality of transport for the casualty	3.0	
Quality of transition from suspension to injury appropriate position on ground	2.6	No real transition to EMS and she wasn't put in position for any kind of suspension trauma. Should have elevated her ankle With a litter right there on site I would have scored higher if they had lowered the victim right on to it. Support provided, head elevated upon landing. Site organized. No EMS on site. No EMS comms after initial 911 call. No communication with EMS and scene was a bit cluttered with ropes and gear. No ems on scene so no transfer of care or how to land them
Care of site, scene, and equipment	3.2	
Transition of care to EMS	2.0	
Communicating the plan	3.0	The patient stopped talking but no one ever said she went unconscious. Their communication was poor and often very quiet They really only reassured the victim and little was said about their actual condition. Good teamwork. Little to no comms regarding casualty. Not that much detail provided to EMS Good communication with the team but no communication with EMS because they werent on scene
Communicating the hazards	3.2	
Communicating with, for, and about the casualty	2.2	
Reaction	3.8	Overall pretty realistic. Just seemed like they stopped communicating half way through felt rehearsed Good, but casualty role play could have been ongoing. No EMS on site. Pretty realistic! Great voice acting and seemed very real
Planning	3.6	
Overall Realism	3.6
