Category	Score (X / 5)	Notes & Commentary from Officials
Site assessment and creation of plan	3.4	Great communication with EMS   Good plan   Vague tree assessment. No site assessment. Work zone cones already set up. Good 911 call. Little plan communicated.   Good detailed description to EMS. Not much of the plan was communicated, but hazards were addressed.   Good communication of the situation to the team and 911 call!
Contacted emergency services; quality of explanation and info provided	4.4	
Efficiency, speed, and safety	4.0	Great ascent, just took some time setting up. Really liked that he stopped on his way up to assess the casualty   Access was pretty nice considering how high the casualty was   Smooth, efficient ascent. Some comms.   Nice job of identifying the possibility for needing BSI, also the mask for COVID-19.   good ascent and continued assessment of the situation
Continued inspection and assessment	3.6	
Identification of hazards	3.4	Did everything necessary to keep them safe. Ground crew communicated when the climber was above the casualty   No other hazards addressed   Unsecure friction saver mentioned. No mention of chainsaw until rescuer in the tree. Chainsaw secured, but left hanging overhead.   Identified the hazard of the chain saw, but wasted time lowering it.   good identification and control of the chainsaw hazard
Method and execution of mitigation	3.6	
Assessment of casualty situation	3.4	Care very well for the patient. It was a bit slow, but lots of care was directed to the casualty and the injury   Nice job packaging the casualty   Cursory casualty assessment. Long pause with little to no comms from rescuer. Makeshift chest harness using casualty's lanyard, somewhat effective to keep her upright. Careful movements near casualty.   Assessment seemed a bit quick, not sure of qualifications of rescuer. Not much attention paid to controlling the descent.   no assessment of the victim prior to moving them and patient was moved around with what seemed like little regard for their comfort
Administration of first aid & assessing of urgency	3.2	
Adequate and appropriate stabilization of casualty for transport	3.4	
Choice of system and technical execution of casualty support/tye in	3.8	Great plan, just took a while to set up   nice descent with casualty   Smooth, gentle lift. Smooth descent. Some support from chest harness.   Took quite a while to get set up, could have tried to upright the injured sooner.   Liked the use of the lanyard to secure the victim but no need to remove the victim prior to the arrival of ems
Quality of transport for the casualty	4.0	
Quality of transition from suspension to injury appropriate position on ground	3.6	Not much said to ems cause they didn't get there. Placed in a comfortable position but no real attention was given to suspension trauma, especially cause she was hanging there a long time   Landing was stellar   Laid flat, no support. Clean site. No EMS on site.   Good communication with EMS.   didnt see any transition of the victim to ems and patient was landed without regard for the injury
Care of site, scene, and equipment	4.2	
Transition of care to EMS	3.0	
Communicating the plan	3.6	Great communication   The planning was continual as the rescue progressed   Light comms throughout. Hazards and mitigation not communicated with team. Little comms regarding state of casualty.   Good communication with EMS, more discussion on the hazards and plan within the team would have been better.   Great communication as a team but no communication with EMS on scene
Communicating the hazards	3.4	
Communicating with, for, and about the casualty	3.6	
Reaction	3.8	Great rescue! Felt real   Very nice work   Decent role play. No EMS on site. Little comms from rescuer.   Hard to make it seem real, but they did a good job.   overall good rescue and it seemed very real!
Planning	3.8	
Overall Realism	3.6
