Category	Score (X / 5)	Notes & Commentary from Officials
Site assessment and creation of plan	3.8	Mentioned the hydro lines a little late, otherwise great communication The plan is made and executed. Good info to 911 Delegating responsibilities. Good 911 comms. Identifying hazards. General plan communicated. Good communication with the team, and EMS. good communication of plan and assessment, hard to hear 911 call so cant score that any better
Contacted emergency services; quality of explanation and info provided	3.6	
Efficiency, speed, and safety	4.2	Great ascent and plan They stay in contact with the casualty and each other throughout the rescue OK assessment. Good team comms. Very little wasted motion and good communication with team. good smooth ascent and identification of hazards aloft. Would like to see Eye pro on climbers, the Pfanner shields are not eye protection.
Continued inspection and assessment	4.0	
Identification of hazards	3.6	Glad to see the first climber go straight to the casualty They note a hanger and stow the chainsaw, note traffic and electrical hazard across the road. Chainsaw mentioned by ground crew. Unsecured rope and friction saver mentioned. Chainsaw secured. Not much for identifying hazards aloft. would have liked to see the victims loose gear secured (ring and ring) and the saw removed from aloft.
Method and execution of mitigation	3.6	
Assessment of casualty situation	3.0	Great patient care The 3:1 helped them package the victim perfectly OK assessment. Jostling casualty. Decent teamwork aloft. Quite a bit of movement of the injured during the initial phase. no assessment prior to moving, moving patient prior to ems arrival
Administration of first aid & assessing of urgency	3.2	
Adequate and appropriate stabilization of casualty for transport	3.4	
Choice of system and technical execution of casualty support/tie in	3.8	Awesome team work with both rescuers having important roles and working well together the two climbers were able to care for Mandy much better than just one. Nice work. What happened to the original 3:1? Suddenly it's a zig zag. Good choice of system and attention to the injured, not so much on speed. Good use of two rescuer removal of victim, great patient centered removal
Quality of transport for the casualty	3.8	
Quality of transition from suspension to injury appropriate position on ground	3.8	Great decent and awesome job getting her on the ground comfortably All textbook Laid flat, but head slightly elevated. Site clear. Administering splint. No EMS on site. Good landing and care. I would have preferred the two rescuers got the victim into a position of comfort while aloft and then moved to the ground once ems arrived and gave direction
Care of site, scene, and equipment	3.8	
Transition of care to EMS	3.6	
Communicating the plan	3.8	Fantastic communication It's Mandy's lucky day actually Decent comms throughout. More detail was needed on the plan and hazards. good communication of the team but no communication with ems
Communicating the hazards	3.4	
Communicating with, for, and about the casualty	3.4	
Reaction	3.8	Overall an awesome rescue! Lovers everything about it! This is how I'd hope a rescue would go Felt like a real response. Hard to be realistic, but they could have had a little more energy about it. this felt very real and was a great improvement from scenario 1
Planning	4.2	
Overall Realism	3.8
